

Test E2E Agent - Lead Interaction Report (08-03-2026)

Executive Summary

This report summarizes all lead interactions recorded on 08-03-2026. Overall activity was light and exploratory in nature, with most conversations remaining at an early discovery or greeting stage. A small number of leads asked product-related questions, mainly around pricing and performance improvement, but no strong purchase or booking intent was established. Engagement quality indicates top-of-funnel interest rather than conversion-ready leads.

What leads were asking (bulleted):

- General greetings and casual check-ins with no specific business intent.
- Requests to be contacted later or short, non-committal responses.
- Questions about what the product (TailorTalk) is and how it works.
- Pricing and plan-related queries (monthly plans and enterprise options).
- Content performance concerns, especially improving Instagram Reels reach and engagement.
- Basic clarification questions (e.g., age or context questions) that did not receive follow-up responses.

Smart Columns summary: Dynamic (Smart) Columns such as *age*, *prior_attempts*, *interested_in_demo*, *booking_date*, *concern_primary*, and *product_interest* exist in the schema, but they are sparsely populated or not consistently captured in conversations for this date. As a result, insights from Smart Columns are limited. Configuring or enforcing Smart Column extraction rules in the agent settings would enable deeper analysis, such as identifying primary objections, demo readiness, and product-level demand patterns.
